

Daily Safety Checklist

Automatic Swinging Door

These minimum safety checks, in addition to those in the Owner's Manual, should be made each day and after any loss of electrical power.

1. Walk toward the door at a normal pace. The door should open when you are about 4 feet from the door.
2. Stand motionless on threshold for at least 4 seconds. Door should not contact you.
3. Walk into the swing area, and stop for 10 seconds. Door should not contact you.
4. Move clear of the area. Door should remain open for at least 1.5 seconds, and should close slowly and smoothly. If two-way traffic, move toward swing side of door. Door should open well before you reach the swing path.
5. Inspect the floor area. It should be clean with no loose parts that might cause user to trip or fall. Keep traffic path clear.
6. Inspect door's overall condition. The appropriate signage should be present. Guide rails and finger guards should be in good condition.
7. HAVE DOOR INSPECTED BY AN AAADM INSPECTOR AT LEAST ANNUALLY.

DO NOT USE DOOR if it fails any of these safety checks or if it malfunctions in any way.
Call your qualified automatic door service company to have door serviced or repaired.
